Description

Also known as the poor man's Cera-F, except for being up to 4 times more durable and very fast in a much wider range of snow conditions at less than 1/2 the cost. Known to keep skis clean and fast for 100 km and more.

Low melt point (130F) prevents any chance of damaging ski base and limits dangerous off-gas. Can be rubbed in.

The Maxiglide Speed Powder is best in humid conditions and on old snow, but will hold its own even on cold, dry, new snow. So if snow conditions are changing throughout the day, your skis will still run well. Contains No Fluorocarbons.
